//note="Organ: eye; Vector: pT73 Pac (Pharmacia) with a
modified polylinker; Site_1: ECON I: Site_2: Not I:
UI-E-EJO is a subtracted cDNA library constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an ECON I adaptor, digested
with Not I, and cloned directionally into PT73-Pac
vector: The oligonucleotide used to prime the synthesis of
first-strand cDNA contenins a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tags for this library are: fetal eyes, AGAATCAAGA;
lloss CGATTAGGCA; eye anterior sequence, AGAATCAAGA;
lloss CGATTAGGCA; eye anterior sequence, This library was
created for the program, Gene Discovery in the Visual
System, supported by National Eye Institute (NEI).

UI-E-EJO is a subtracted CDNA library constructed
according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded CDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT73-pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (TT)18 tail. The sequence tags for this library are: fetal eyes, AGAATCAGA; lens, CGATTAGCGA; eye anterior segment, AATGCCGAT; optic nerve, CCATTAAGTG; retina, CCGCG; Retina Foveal and Macular, GTCC; RPE and Choroid, ACCTA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI)."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 N. ```
The invention relates to polynucleotides encoding a new collectin of human origin. The collectin can be used as an antibacterial and antiviral agent and for screening potential drug molecules. The new collectin can be produced by standard recombinant methodology. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                            New collectin of human origin having antibacterial and antiviral activity, and gene encoding it useful for production of transgenic animals and of antibodies for screening potential drug molecules .
                                                                          8

The protein is useful as a target molecule for diagnosis, prevention and treatment of autoimmune diseases such as rheumatoid arthritis.

arteriosclerosis; diabetes; bacterial infection; restenosis; angloplasty;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence encodes a human scavenger receptor, designated SRCL-P1. The SRCL-P1 polypeptide has a collectin-like structure. They are useful in clarifying the functions of macrophages and basal immunity. They are also useful in the treatment, prevention, diagnosis and investigation of diseases such as arteriosclerosis, diabetic complications, bacterial infection and restenosis following angioplasty, which are associated with accumulation of oxidized low density lipoprotein and the binding of advanced glycation end-products into
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New Scavenger receptor proteins SRCL-P1 with collectin-like structure, useful for treatment and diagnosis of diseases associated with oxidized low-density lipoprotein accumulation

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and

The present invention provides the protein and coding sequences for 25 novel extracellular matrix and adhesion-associated proteins (EXMADS). These are designated EXMAD-1, EXMAD-3, EXMAD-3, EXMAD-5, EXMAD-6, EXMAD-1, EXMAD-10, EXMAD-11, EXMAD-11, EXMAD-12, EXMAD-13, EXMAD-13, EXMAD-14, EXMAD-15, EXMAD-16, EXMAD-17, EXMAD-19, EXMAD-23, EXMAD-24, and EXMAD-19, expand-14, EXMAD-17, EXMAD-18, EXMAD-19, are useful in the prevention and treatment of cancers, cell proliferation, cardiovascular, reproductive, immune, musculoskeletal, developmental and

```

The invention relates to human secreted or transmembrane protein (1), their fragments and is encoded by specific complementary deoxyribonucleic acid (CDRA) inserts (11), where the protein is substantially free from other mammalian proteins. (1) are useful for preventing, treating or meliorating a medical condition, especially immunological treatment or prevention of tumours. (1) exhibits activity relating to angiogenesis, cytokine, cell proliferation, cell differentiation, antilnflammatory, stem cell growth factor activity and activity or inhibin-related activities. (1) can be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease, accidental damage or regeneration of nerve and brain tissue and is useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic activity, regulation of haematopolesis and is useful for treating myeloid or lateral sclerosis. (1) is involved in chemotactic or chemokinetic activity, regulation of home, cartilage, tendon, ligament and/or nerve (1) sainolated disorders such as thrombocytopaenia cativity, regulation of home, cartilage, tendon, ligament and/or nerve (1) sainolated disorders such as thrombocytopaenia con for regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, various immune deficiencies and disorders including cepeneration and treatment of lung or liver fibrosis, reperfusion injury and anterious immune deficiencies and disorders including cepeneration and encoder or produced immuned deficiencies and disorders including cepeneration and encoder or produced immune deficiencies and disorders including cepeneration and preatment of lung or liver fibrosis, reperfusion injury and an encoder or produced immuned deficiencies and encoders including anterior and preatment of an encoder or produced in various fibrosis. autoimmune disorders e.g. multiple sclerosis, rheumatoid arthritis, diabetes mellitus, myasthenia gravis, allergic reactions and conditions, such as asthma or other respiratory problems. (II) is useful to express recombinant protein, as markers for tissues in which the corresponding protein is preferentially expressed and in gene therapy. The present sequence is that of a polynucleotide of the invention

This sequence encodes a human secreted protein of the invention.
This DNA sequence was isolated from a human adult brain cDNA
library, and was designated clone bv227_1. The DNAs and proteins
are predicted to have biological activities which would make them
suitable for treating, preventing or ameliorating medical conditions in
humans and animals, although no supporting data is given. Suggested
activities include nutritional sources or supplements, immune
stimulating or suppressing activity, haematopoissis regulating activity,
tissue growth activity, activin/inhibin activity,
chemotactic/chemokinetic activity, haemostatic and thrombolytic activity,
chechtor/ligand activity, anti-inflammatory activity, cacherin/tumour
invasion suppressor activity, and tmour inhibition activity. The DNAs
are also stated to be useful for gene therapy. A host cell transfected
with the DNA, or its subfragments and variants is useful for recombinant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AATAATACCCTGGCCAACATCCGTTTGGATTCTGTTTCTCTCAGGATGCAACAAGATTTG 1280

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to human nucleic acids (AAIS7798-AAI61369) and the invention relates to human nucleic acids (AAIS798-AAI61369) and the invention may be used to treat diseases of the polymucleotides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the peripheral nervous system such as peripheral nervous injuries, peripheral nervous system disease, such as large-inferior nervous system disease, such as large-inferior central nervous system disease, such as allocalised neuropathies and central nervous system disease, such as allocalisation of the activities such as: Immune system suppression, activity, chemotextic/chemokinetic activity, haemostatic and thrombolytic activity, chemotextic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and c.N.S disorders.

The present invention provides the protein and coding sequences of human PRO proteins. These are useful for treating or diagnosting a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, may candial infarctions, thrombophiebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The present sequence is a coding sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        One hundred and eighty seven nucleic acids encoding PRO polypeptides, useful in diagnosis and treatment of cardiovascular (e.g. myocardial infarction), endothelial or angiogenic disorders in a mammal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                253

activities, and can be used in gene therapy. The PRO polynucleotides, proteins, agonists and antagonists are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder in a mammal, e.g. cardiac hypertrophy, trauma, cancer, age-related macular degeneration, therosoclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, mycoardial infarctions, thrombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The PRO polynucleotides have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. ABLB81259 to ABLB81267 represent primers and probes used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                         SRCL-FI. The SRCL-PI polypeptide has a collectin-like structure. They are useful in clarifying the functions of macrophages and basal immunity. They are also useful in the treatment, prevention, diagnosis and investigation of diseases such as arteriosclercosis, diabetic complications, bacterial infection and restenosis following angioplasty, which are associated with accumulation of oxidized low density lipoprotein and the binding of advanced glycation end-products into cells.
                                                                     New Scavenger receptor proteins SRCL-P1 with collectin-like structure, useful for treatment and diagnosis of diseases associated with oxidized low-density lipoprotein accumulation

                                                                                                                                                                                                                                                                                     The present sequence encodes a human scavenger receptor, designated SRCL-PI. The SRCL-PI polypeptide has a collectin-like structure. They are useful in clarifying the functions of macrophages and basal immunity. They are also useful in the treatment, prevention, diagnosis and investigation of diseases such as arteriosclerosis, diabetic complications, bacterial infection and restenosis following angioplasty, which are associated with accumulation of oxidized low density lipoprotein and the binding of advanced glycation end-products into

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving to restore normal activity of (II) or to treat disease states involving quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical clasorders involving aberrant protein esquences have applications in the printed diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic coding sequences of data and products dependent on DNA and diagnostic coding sequences of the invention.

This sequence encodes the human cellular stress response 1 (CSR1) protein of the invention. The CSR proteins are macrophage scavenger receptor proteins. The CSR proteins can be used in the treatment, gene therapy and diagnosis of diseases in which intracellular stress is important, such as arteriosclerosis, diabetic circulatory obstruction, and microbial infection. Expression of the proteins is induced in vivo in response to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              g
                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence encodes the human cellular stress response 3 (CSR3) protein of the invention. The CSR proteins are macrophage scavenger receptor proteins. The CSR proteins can be used in the treatment, gene therapy and diagnosis of diseases in which intracellular stress is important, such as arteriosclerosis, diabetic circulatory obstruction, and microbial infection. Expression of the proteins is induced in vivo in response to intracellular stress, and inhibits cell death as a result of such stress.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ACAGACCTGCTCCGGGAGCGCTTCAGCCTGATCCCCGGCTGGACCTCAACGTCCGG 1437

Patent No. 6007980

GENERAL INFORMATION:
APPLICANT: Readers, Stephen T
APPLICANT: Morrison, Karen E
APPLICANT: Hudson, Billy G
TITLE OF INVENTION: Alpha-3 Chain Type IV Collagen Polypeptides
TITLE OF INVENTION NUMBER: US/09/167,364
CURRENT FILING DATE: 1998-10-07
EARLIER RIPING DATE: 1998-10-07
EARLIER RIPING DATE: 1998-10-07
NUMBER OF SEQ ID NOS: 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  816 TICTCTTCTTTGTACAAGGAAATGAACAAGCCCATGGACAGGA-----
